EXPERIENCE

Oracle India Pvt. Ltd.

Hyderabad, India

Senior Software Engineer – Fusion Data Intelligence

Jun 2021 – Present

- Led design and development of the **Data Pipeline Integrity Validator**, owning architecture and feature expansion across **20+ pipeline job types**; mentored junior engineers and added new validations, automations, and health checks that reduced **data-quality issues by 30%** and saved **200+ engineering hours/quarter**.
- Built a **diagnostics and telemetry framework** and led **production incident response** for distributed services under SLA, using **metrics, logs, and traces** to accelerate root-cause analysis and reduce **MTTR**.
- Developed key components of the **Parallel Prediction** feature, enabling **sequence-aware concurrent execution** with configurable concurrency and retries, ensuring prediction jobs complete within **SLA** under **high concurrency**.
- Engineered scalable **backend services for high-throughput data ingestion and processing**, powering analytics across **25+ Fusion modules** for **1,000+ enterprise customers**, processing over **1 trillion records monthly** with individual datasets scaling to **11+ billion rows**.
- Extended data-pipeline capabilities through the **Beyond Publish** feature, integrating external cloud targets (**OCI Object Storage, AWS S3**) and enabling **multi-destination publishing** with retry logic and **data-integrity validation**.
- Led critical **platform upgrades** (JDK 8→17, OEL 7→8, Vault integration) for production pipelines, ensuring **zero downtime** across **1,000+ deployments** with full backward compatibility.

NVIDIA Corporation

Pune, India

Software Engineering Intern

Jan 2021 – Jun 2021

- Contributed to **processor debugging tools** and **testing infrastructure** for the SoC development team.
- Improved toolchain reliability through **dependency reduction** and **cross-platform compatibility** enhancements.

PROJECTS

Personal Automation Suite | Python, Local LLMs, Groq API

- Built an **automated content pipeline** using local LLMs for OCR and text extraction, with Groq API for content transformation; orchestrated multi-step workflow with robust error handling and retry logic.
- Implemented **rate-limiting, batching, and retry logic** to reliably handle API failures across LLM services with different rate limit constraints.

Shiraberu – Manga Tracking App | Java, Spring Boot, MySQL

- Developed a full-stack manga tracking application with authentication, RESTful APIs, and a responsive UI.
- Implemented asynchronous fetchers for external manga APIs and built CRUD workflows for user libraries.

EDUCATION

Birla Institute of Technology and Science, Pilani (BITS Pilani Goa)

Goa, India

B.E. (Hons) in Electronics And Instrumentation

Graduated 2021

TECHNICAL SKILLS

Languages: Java, SQL, Python, Bash

Frameworks: Spring Boot, Hibernate/JPA, REST APIs, JUnit/TestNG

Cloud & Tools: OCI, AWS (S3), Jenkins, Docker, Git

Core Areas: Backend Service Architecture, Distributed Systems, Microservices, System Design, High-Throughput Services, Observability, Performance Tuning
